

D-optic Red Dot Sight

Special features of **D-optic** Red Dot Sight include:

- Tubeless design with 33mm reflex lens aperture provides a wide field of view, ideal for rapid fire and moving targets.
- Multi-Reticule (4 patterns) or Variable Dot (4 different sizes) are available.
- Parallax corrected and unlimited eye-relief.
- Allen head screw windage and elevation click adjustments with locking screw (see diagram below)
- Built-in mount (integrated rail) for Weaver style bases. Maintains zero when remounting the sight.
- Very light weight, waterproof and shockproof.
- Low power consumption for long battery life.

BATTERY

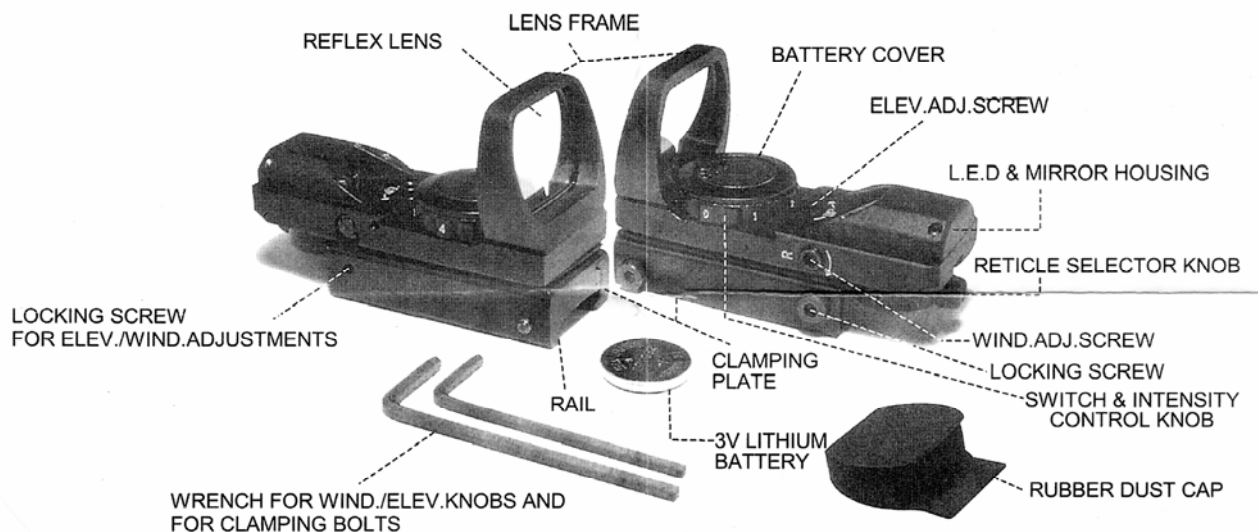

D-optic Red Dot Sight is powered by one 3V lithium battery (CR2032 or equivalent). Should your reticule grow dim or not light, you will need to replace the battery. To install battery, unscrew battery cover and insert the new one + side up, and replace the cover.

MOUNTING

D-optic Red Dot Sight includes an integrated rail that fits standard Weaver style dovetailed bases. Eye-relief of the D-optic Sight is unlimited, however you should provide at least three inches (7.62cm) of clearance between the end of the sight and your eye when shooting. Set the rail onto the base so that the rail claw aligns with the crosscut grooves. Work the claw into the base until the cross-bolt seats into the groove. Securely tighten the locking screw with an Allen wrench.

ZEROING

Select the reticule you desire by turning the reticule selector knob and set the intensity. Rest the gun on a solid support and aim at a target 50 to 100 yards (or metres) away. For maximum accuracy, zeroing should be done under the same conditions. Shooting from a firm rest and using the same type of cartridges is recommended. Each click adjustment moves the point of impact by 1MOA (approximately 1" at 100yds, 1/2" at 50yds).

SPECIFICATION:

Power	Obj. Aperture	Field of View	1 Click	Length	Weight
1X	33mm	15.7m at 100m	1 MOA	82mm	115g
